Introducing the North EVO 2008

Never before has performance been so easy! Impressive light wind abilities, enormous wind range, forgiving flying characteristics and easy bar feeling are just some of the features of the New North Evo. The Evo's precise steering response always delivers predictable and controlled jumps, even if your takeoff is not perfect. The innovative Bridge Profile geometry optimises airflow and gets you up and planning in extremely light air, even when the Evo is over-sheeted. This Profile balances the load distribution around the leading edge which prevents the North Evo from ever back stalling and is the key to its acceleration in light winds.

Key Features:

- **4 line or 5 line**
- **Kevlar reinforcement**
- **Bridge Profile Design**
- **Ideal beginners kite**
- **Stable and precise handling**

With its simple bridle configuration the Evo can be used with the 4 line 'Evo Bar', or with the 5th Element system. In 4 line mode the Evo is ideal for everyone who favours easy re-launch and simple handling whilst the 5th Element mode additionally stabilises the kite for optimal performance, direct handling and best safety. With its solid Dacron trailing edge and Kevlar reinforcement the Evo is rigidly constructed for maximum durability even in extreme conditions.
